

**Aqwise @ IFAT 2016 Munich Trade Fair and Exhibition –
Presenting new technological developments, business updates
and showcasing global success stories**

Munich, Germany – IFAT Trade Fair – May 30-June 3, 2016

Aqwise – Hall A2, Stand 417

[Aqwise](#) – a leading provider of advanced and innovative water and wastewater treatment solutions, will present new technological developments and business progress during the IFAT 2016 Trade Fair and Exhibition in Munich, Germany during May 30-June 3.

The company's innovative technology portfolio include aerobic water and wastewater treatment solutions (the AGAR[®] MBBR and IFAS processes), as well as anaerobic industrial wastewater treatment (the DACS[®] process). The various solutions provide municipal and industrial clients with extensive biological nutrient removal (BNR) capabilities, as well as treatment of high-strength waste streams, allowing water reuse and energy generation, while meeting the required regulations.

Only several months ago, Aqwise marked 15 years of diverse activity in the global water and wastewater market. Since its inception in 2000, Aqwise has demonstrated technological leadership and has managed to generate an impressive track record – with more than 400 installations in over 35 countries across 6 continents.

Offering its international municipal and industrial clients and network of partners a wide range of professional services and versatile business models, Aqwise managed to consistently and rapidly grow and expand into new segments and territories.

In recent years Aqwise has successfully entered into a number of challenging industrial segments, working repeatedly with tier one global clients such as Teva Pharmaceuticals, Perrigo, Coca Cola Iceçek, Sadesa and Unilever.

Aqwise's Dutch joint venture [Aqana](#), specializing in anaerobic wastewater treatment, provides solutions to major European clients in the pulp & paper industry, food processing and starch production, as well as in the brewery sector.

All in all, Aqwise solutions enable clients with retrofit and reuse of existing equipment, infrastructure and resources – primarily water and energy – and provide an excellent Return on Investment.

During the IFAT 2016 Munich Trade Fair and Exhibition, Aqwise will host visitors from around the world, will carry out a professional seminar for partners and distributors and will hold a cocktail event for clients, colleagues and friends.

About Aqwise

Aqwise is a global industry leader in the development and implementation of innovative water and wastewater treatment solutions. Aqwise's innovative, field proven technology reduces BOD levels and increases nutrient removal capabilities.

Aqwise offers both aerobic and anaerobic solutions for a diverse range of industrial and municipal needs and delivers integrated, tailor-made solutions for both new and existing plants – from small scale compact units to large scale facilities.

With over four hundred of water and wastewater treatment plants successfully implemented worldwide, Aqwise project deployment methodology and wide range of services are designed to meet global clients' priorities and operational needs.

The company is headquartered in Israel and has regional offices, subsidiaries and commercial representation in Latin America and Europe, as well as in North America, the Middle East, India and China.
