

Aqwise Completes Wastewater Treatment Plant at Unilever Ice Cream Factory in Vermont, USA

Herzliya, Israel – March 2018

Aqwise – Wise Water Technologies Ltd., a global provider of advanced wastewater and water treatment solution for the industrial and municipal sectors, has recently completed the construction of a wastewater treatment plant at the Ben & Jerry's ice cream factory in Vermont, USA, as part of the plant's expansion. Ben & Jerry's Homemade Inc. is a wholly-owned subsidiary of Unilever Industries Ltd.

Aqwise was selected by Unilever for the design, construction, commissioning and testing of the WWTP, which treats wastewater from the recently completed expansion of the factory. The WWTP provides automatic adjustment of the pH of the wastewater to within the permissible limits prior to discharge to the public sewer system.

The project was completed on schedule, in less than 8 months, and was fully ready for operation when the first gallons of wastewater were generated from the new ice cream production lines.

Elad Frenkel, Aqwise CEO: "Aqwise is proud to be a global provider to Unilever for all their wastewater treatment needs, large and small. The project recently completed at Ben & Jerry's factory in Vermont is a good indication of the level of commitment we have to key global account such as Unilever, which we expect to continue and maintain in future projects, per their requirements".

Aqwise is currently executing a large number of complex wastewater treatment projects world-wide, for both public and private sector clients, in Europe, Central & South America, Russia, SE Asia, China and India.
